🌐 Portfolio

SUMMARY

- Computer Science undergraduate with experience in both **frontend and backend development**.
- Skilled in building responsive user interfaces using **React, Tailwind CSS, and JavaScript**.
- Strong foundation in **DSA** and experience developing scalable APIs using **FastAPI** and **Flask**.

EDUCATION

Vignan's Institute of Information Technology

CGPA: 8.74

BTech in Computer Science and Engineering (Artificial Intelligence)

2024 – 2028

Narayana Junior College

Percentage: 92.9

Intermediate - MPC

2022 – 2024

PROJECTS

Pitwall F1 Analytics Platform | Live | GitHub

Full-Stack Developer

- Built a Formula 1 analytics platform to analyze driver performance, race pace, and strategies using real telemetry data.
- Designed RESTful APIs using **FastAPI** to process sessions, laps, and performance metrics.
- Developed frontend using **React** to visualize race insights with interactive UI components.
- Implemented analytics features like **consistency ranking, pace comparison, and stint analysis**.

CitySense | Live API | GitHub

Machine Learning Developer

- Built a crime-risk prediction system using NYC crime data to predict the probability of at least one crime occurring in a given area and hour.
- Engineered geographic, temporal, and historical crime features across 3M+ records spanning 2020–2025.
- Developed an **XGBoost** classification model and deployed it as a **FastAPI** REST API for real-time predictions.
- Optimized the model from 600 to **200 trees**, reducing model size from 51.5 MB to 23.5 MB while maintaining similar validation performance.

Personality Prediction Web Application | Live | GitHub

Full-Stack Developer & Machine Learning Engineer

- Built an AI-powered personality prediction web application to classify **MBTI personality types** using machine learning and natural language processing techniques.
- Developed and trained classification models using **Python, Scikit-learn, and TF-IDF vectorization** on large-scale personality datasets.
- Designed and integrated **FastAPI** REST APIs for real-time personality prediction, text preprocessing, and model inference.
- Developed an interactive **React** frontend featuring personality analysis, confidence scoring, and detailed behavioral insights visualization.

Interactive Digital Library | Live | GitHub

Full-Stack Developer

- Developed a Flask-based application with a clean, interactive UI for exploring books.
- Built responsive frontend using **Tailwind CSS** and **JavaScript** with smooth transitions and loaders.
- Integrated **AI-generated visual and audio summaries** to improve engagement.
- Ensured ethical content access by redirecting users to public external sources.

SKILLS

Languages: Python, C, JavaScript, SQL

Frontend: React, Tailwind CSS, HTML, CSS

Backend: FastAPI, Flask, REST APIs

Machine Learning: Scikit-learn, LightGBM, NLP, TF-IDF, Classification, Feature Engineering

Databases: PostgreSQL

Core Concepts: Data Structures, Algorithms, OOP

Tools: Git, GitHub, Docker, Alembic

CODING PROFILES

CodeChef (Rating: 1420) **LeetCode** (150+ Problems)

ACHIEVEMENTS

- Top 10 in Supersus Hackathon
- Solved 400+ DSA problems across LeetCode and CodeChef
